

Ian Strouse

Full Stack Engineer

(720) 933-2004 ian.strouse@gmail.com

Profile

Results-driven full stack engineer with 10 years of experience, specializing in the design and development of APIs, SQL databases, and systems architecture. My passion has always been in bridging the divide between people and tech.

Skills

JavaScript / TypeScript	React + Next.js	GraphQL	AWS	Microservices
Python	Node.js + Express	SQL + Postgres	REST API	System Design

Experience

FULL STACK ENGINEER, WAVELYNX; BROOMFIELD, CO — 2025-CURRENT

- Own Production Worker, a Python/Kivy application deployed on Raspberry Pi stations across the manufacturing floor, used to program and test access control readers in a high-volume production environment.
- Architect and maintain the full Raspberry Pi system image — headless OS plus Ansible-driven provisioning — enabling consistent, repeatable deployment of production line stations.
- Develop and maintain QueueView, a full-stack PHP/MongoDB app (built on Cockpit CMS) that serves as the source of truth for orders moving through production, exposing a REST API consumed by Production Worker and a UI used directly by manufacturing staff.
- Act as a technical point of contact between Manufacturing and Engineering, translating floor-level needs into software features that improve order throughput and reduce handling errors.
- Use Claude Code to accelerate debugging and delivery in a fast-paced manufacturing environment, cutting root-cause investigation and resolution time from hours to minutes.

FULL STACK ENGINEER, PRODUCT PLAN; DENVER, CO — 2024-2025

- Built legends for product timelines using React and Ruby on Rails, enabling users to customize strategic portfolio views, improving flexibility, visual storytelling, and team alignment.
- Implemented AI-driven analysis using AWS Bedrock to surface themes and recommend initiatives from user ideas, accelerating discovery and enabling teams to prioritize high-impact problems.
- Partnered with Product team to research repositioning “Opportunities” as “Initiatives,” elevating their strategic role with rich text editing, linking, and improved roadmap integration. Evaluated rich text editors to enhance Initiative editing, selecting a scalable, user-friendly solution based on extensibility, performance, and system integration.

BACKEND ENGINEER, DISCOVERY GENIE; DENVER, CO — 2017-2024

- Revitalized the backend system for V2 by orchestrating a ground-up reconstruction, strategically incorporating advanced technologies such as TypeScript, NodeJS, GraphQL, and PostgreSQL, coupled with industry best practices. Achieved substantial improvements including a significant reduction in bugs, elevated system performance, and notably enhanced code readability, contributing to a more robust and efficient software foundation.
- Implemented and managed multiple 3rd party API integrations (AWS, Stripe, Clio, etc), improving user experience and meeting business objectives.
- Orchestrated seamless deployment and integration of services in AWS through close collaboration with the DevOps team, ensuring optimal performance, scalability, and reliability of the system.
- Implemented comprehensive test coverage comprising a combination of unit and integration tests, contributing to rigorous testing standards and feature verification.
- Collaborated with the Front-End team and stakeholders, ensuring the on-time delivery of API endpoints to provide front-end with required functionality.

FULL STACK ENGINEER / CO-OWNER, GOOWEE; BOULDER, CO — 2016-2022

- Established and maintained robust infrastructure and hosting environments for WordPress websites and React/Node web apps running on DigitalOcean, increasing uptime to >99.99%.
- Delivered persuasive sales presentations that led to a 50% increase in client acquisitions for hosting and maintenance services.
- Managed seamless integration and utilization of third-party services and plugins, enhancing website functionality and user experience.
- Co-founded and pioneered the establishment of the company and architected innovative business processes to support operations and scalability.

Education

Galvanize, Boulder — Full Stack Web Development, 2016
University of Utah, Salt Lake City — Film Studies, 2005

Other

Co-Organizer | Boulder React Meetup, Boulder 2017–2020
Education Volunteer | Peace Corps, Madagascar 2013-2015
Support Member | Rocky Mountain Rescue, Boulder 2010-2013
